

Coding Contribution Statement

Factory Inventory & Production Management System (MVP)

Role Name: HJMSM jayasinghe (Quality manager)

Assigned Coding Responsibility: Operations in Inventory Management in Suppliers

Relevant frontend work

- Supplier management page in client/src/pages/Suppliers.tsx, including supplier listing, add-supplier modal, form handling, and success or error feedback.
- Supplier selection support in client/src/pages/GRNList.tsx, where supplier data is consumed as part of stock-in operations.
- Role-based route exposure for supplier management through the main application routing and internal navigation structure.

Relevant backend work

- Supplier CRUD implementation in server/src/modules/suppliers/suppliers.routes.ts, including list, create, get-by-id, update, and delete operations.
- Supplier persistence model in server/src/db/models/Supplier.ts with name, contact person, phone, email, and address fields.
- Supplier validation in the suppliers module for mandatory name handling and optional contact data constraints.
- Audit logging for supplier create, update, and delete actions to maintain operational accountability.

Supporting implementation work

- Connected supplier records to GRN handling so supplier data is not isolated but participates in actual inventory intake.
- Supported supplier sample data in server/src/seed.ts so the supplier area works immediately in local setup and demos.
- Maintained supplier management as an operational support function for purchasing and stock-in activities in the factory flow.

Conclusion

This coding ownership is documented as responsibility for the supplier operations area of inventory management, covering supplier CRUD, validation, supporting UI, and the integration of suppliers into

the goods-received workflow.
