

Coding Contribution Statement

Factory Inventory & Production Management System (MVP)

Role Name: Heshan Shalinda Korlagamage (Risk manager)

Assigned Coding Responsibility: Report Generation

Relevant frontend work

- Report dashboard implementation in client/src/pages/Reports.tsx with separate tabs for stock on hand, stock movements, expiry, production, wastage, sales by wholesaler, and traceability.
- Frontend query controls for report date ranges, expiry days, and optional wholesaler-based traceability filtering.
- Report table rendering for aggregated inventory and operational data, including readable traceability output by dispatch allocation and batch.
- PDF-related download interaction in client/src/pages/Dispatches.tsx for delivery note retrieval.

Relevant backend work

- Reporting endpoints in server/src/modules/reports/reports.routes.ts for stock-on-hand, movements, expiry, production, wastage, sales-by-wholesaler, and traceability.
- Aggregation and reporting logic built on RawStock, FinishedStock, StockMovement, Batch, Order, and Dispatch collections to produce report-ready output.
- Delivery note PDF generation support in server/src/utills/pdf.ts and the download route in server/src/modules/dispatch/dispatch.routes.ts.
- Query validation for report parameters such as date ranges, expiry windows, pagination, and optional wholesaler filtering.

Supporting implementation work

- Connected reporting outputs to real inventory and dispatch data rather than static summaries, which strengthens operational traceability.
- Included both analytical views and printable output support, using the delivery-note PDF flow as the document-output piece already present in the repository.
- Supported readable report behavior in the UI through consistent loading, filtering, and table presentation patterns.

Conclusion

This coding ownership is documented as the report-generation contribution to the project, covering report UI delivery, reporting APIs, aggregation logic, traceability views, and the existing PDF-based document output connected to dispatch operations.
