

QA Validation Report - Sprint 4

Final Verification Results

- ? npm run build --workspace=server -> pass
- ? npm run build --workspace=client -> pass
- ? npm run test:server -> pass
- ? npm run test:client -> pass
- ? npm run lint -> pass

Functional Regression Status

- ? Auth and role-aware routing: pass
- ? GRN confirm and stock-in flow: pass
- ? Batch start/complete with consumption capture: pass
- ? Order confirm/cancel and wholesaler views: pass
- ? Dispatch FEFO allocation and PDF generation: pass
- ? Reports (including sales-by-wholesaler and traceability tabs): pass
- ? Audit log query for owner role: pass

Defects Closed in Sprint 4

1. Production CORS preflight failures resolved with function-based allowlist.
2. Nested API route reliability improved using explicit Vercel route mapping.
3. Batch UI completion gap closed.
4. Documentation mismatch corrected for deployment and troubleshooting.

Residual Risks

- ? Deployment environment misconfiguration remains the main operational risk; mitigated by updated runbooks.

QA Sign-off

Sprint 4 accepted as submission-ready release state.
