

Coding Contribution - Scheduling Manager

Contribution Scope

Supportive implementation tied to deployment sequencing and release coordination.

Implemented/Supported Code Areas

- ? Supported routing/rewrite configuration updates used for deployment scheduling checkpoints:
- ? client/vercel.json
- ? server/vercel.json
- ? Supported command/script alignment checks in root workflow (package.json scripts and execution order).
- ? Supported production verification command workflow used during stabilization cycles.

Evidence-Based Role Fit

These tasks are coding-adjacent and technically necessary for schedule integrity, cutover planning, and predictable releases.

Team Coding Distribution (Agreed)

- ? Nisal Dulneth Wickramaarachchi (Start up manager): 62%
- ? NBUUB Balalla (Project manager): 10%
- ? KMDD Kulathunga (Scheduling manager): 8%
- ? HJMSM Jayasinghe (Quality manager): 11%
- ? Heshan Shalinda Koralagamage (Risk manager): 9%

Scheduling role contribution is intentionally smaller and supportive, consistent with responsibility boundaries.
